

Color the Critter

Peppered Moth Camouflage

The peppered moth is a fascinating insect that uses its color patterns to blend with its habitat. Color this moth below to blend with an environment of your choice. Then cut it out and see how well it camouflages -- can your family or friends find it?

Images above show both variations of the peppered moth: white-bodied and black-bodied. On average, this moth's wingspan is 55 mm or 2.16 inches.
